

# Taking glass cleaning to new heights.

## About AERAS

Headquartered in Pittsburgh, PA., **AERAS** is an emerging technology company specializing in advanced drone applications. The company challenges the standards of drone technology with its revolutionizing research, such as developing the only drone in the world operating with a charged-electrostatic disbursement system.

**AERAS** drones have the capacity to serve as an alternative to traditional commercial window and glass façade washing, which can support both building owners/operators and facility managers. By partnering with Vitro to bring its innovative techniques to more markets, **AERAS** drones have the power to change the glass washing status quo.

## ACHIEVEMENTS

- First company in the United States certified by the Federal Aviation Administration (FAA) to use drones to provide decontamination services against viral contaminants such as COVID-19 at large gathering spaces.
- Used patented charged-electrostatic drones combined with EPA best practices to sanitize and power wash Churchill Downs for the 2021 & 2022 Kentucky Derbies.
- Used its high-powered drones to sanitize PPG Paints Arena for Pittsburgh Penguins' hockey games the last three seasons.
